MOHANAD YEHIA

Software QA Engineer

+20 100 289 0059 | mohanned.3262@gmail.com | LinkedIn | GitHub | Portfolio

SUMMARY

ISTQB CTFL-certified Software QA Engineer with 1+ year of production QA ownership and enterprise testing experience at Atos (MCIT PDPC). Built automation from manual migration testing, achieving 85% admin-portal regression coverage with Playwright and full mobile coverage with Maestro, both CI-gated. Experience spans web, mobile, API, SQL and performance testing, CI/CD ownership, and AI-assisted testing in Agile teams.

EXPERIENCE

Blue Ribbon **Jul 2025 – Present**

Software QA Engineer *Cairo, Egypt*

- Own end-to-end quality for a production club-management platform (Flutter mobile app + multi-tenant admin portal, PostgreSQL, REST API, Paymob payment gateway, Odoo ERP) across 22+ modules including wallet/payments, dining orders, court bookings, academies, access control, and CRM notifications.
- Authored **5,000+ test cases** and drove **600+ defects** to resolution across functional, regression, and cross-module scenarios, including verifying refund logic (fixed + percentage cancellation fees) and multi-currency payment flows through the Paymob 3DS integration.
- Led testing through the platform's **first production launch and legacy-system migration**, testing against the production environment and using SQL on the production database to verify data integrity and diagnose backend issues.
- Built the team's web automation framework from scratch in **Python/Selenium** (Page Object Model, custom HTML reporting), then migrated it to **Playwright/TypeScript** for faster execution and richer trace/video debugging, reaching **85% automated regression coverage** of the admin portal, runnable on a single command.
- Built mobile automation for the Flutter app, evaluating **Appium** before adopting **Maestro** to cut flakiness and setup overhead; implemented reusable YAML flows across authentication, wallet operations, dining, and booking journeys.
- Implemented **CI/CD in GitHub Actions** with separate web and mobile workflows triggered on each release to catch regressions before deployment; added automated REST API checks.

Atos **Jul 2026 – Sep 2026**

Software Testing Intern *Cairo, Egypt*

- Completed a structured software-testing training track and graded assignments in test case design, exploratory testing, defect reporting, root cause analysis (5 Whys), and **Playwright/TypeScript** UI automation built on the Page Object Model with fixtures.
- Assigned to **MCIT Personal Data Protection Centre (PDPC) platform**, Egypt's national data-protection regulator under Law 151/2020, on a multi-phase government programme entering Phase 1, covering its Petition and Regularization services.
- Authored **90+ test cases across 25 user stories** spanning role-based access (profile owner, legal representative, DPO), third-party identity/registry integration gates, document eligibility, administrative fee determination, and payment paths; peer-reviewed by senior QA and published to **Azure DevOps**.
- Built a **Bruno API collection** for the Submit Inquiry endpoint covering all four requestor types and seven negative/validation scenarios, surfacing defects including an unhandled 500 that leaked internal CRM entity and attribute names instead of the specified 400 validation error, and two error codes mapped to the wrong entity type.
- Executed the Regularization suite against staging after each sprint deployment and logged defects to developers in Azure DevOps, working the full sprint cadence of stand-ups, planning, and refinement with the senior QA team.

ENPPI (Engineering for the Petroleum and Process Industries) **Aug 2024 – Sep 2024**

IT Intern *Cairo, Egypt*

- Completed a 120-hour technical training program in the IT Division working with Oracle Forms and ASP.NET MVC 4, applying networking and system-administration concepts and contributing to internal operations documentation.

MBG Developments **Jul 2024 – Aug 2024**

Software Engineer Intern *Cairo, Egypt*

- Prepared and executed 20+ structured test cases across SAP S/4HANA Sales & Distribution modules, validating master-data configuration and transactional flows for 5+ business departments; supported onboarding of 10+ new ERP users.

PROJECTS

TestPulse: Test Observability & Flake-Detection Platform | *Python, FastAPI, React/TypeScript, PostgreSQL, GitHub Actions*

- Built a full-stack tool that ingests CI test results (JUnit, Playwright, Allure, PyTest), computes per-test flakiness and duration trends, and surfaces them in a dashboard and automated PR comments, with a configurable flake classifier and an expiring quarantine list.
- Published a static dashboard of real CI results, refreshed through scheduled exports.

Cal.diy QA Strategy & Automation | *Playwright/TypeScript, Python, Cucumber (BDD), k6, Docker*

- Delivered a layered QA engagement against Cal.diy v6.2.0 (the final public Cal.com open-source snapshot): risk-led strategy, Python API contracts, Playwright/TypeScript E2E with selective **Cucumber (BDD/Gherkin)**, and k6 CI gates.
- Tested timezone/DST, booking lifecycle, accessibility, performance and 20-way contention; filed two upstream API-contract defects after duplicate searches and reproduction against a pinned public commit.

LLM Evaluation & Prompt-Regression Harness | *Python, PyTest, RAG, LLM-as-judge*

- Built a pytest-native LLM evaluation harness with versioned golden datasets, repeated sampling, prompt-version comparisons, and replay-based regression and adversarial CI checks. Measured refusal-judge agreement against 45 blind human labels (Cohen's κ=0.51); excluded judge scores from CI gates.

Additional Frameworks | *Playwright, Selenium, Maestro, Requests*

- Built OrangeHRM E2E tests with Playwright/TypeScript and POM, Selenium/PyTest tests for The Internet, Wikipedia Android flows with Maestro, and GitHub API tests covering token authentication, schema validation and rate-limit handling. Integrated GitHub Actions CI across the suites, with Allure reporting for web/API tests and JUnit output for mobile tests.

EDUCATION

German University in Cairo, Faculty of Media Engineering and Technology — **Sep 2021 – Jul 2026**
B.Sc. Computer Science and Engineering — *Cairo, Egypt*

Graduation Project: Car Price Prediction Using Machine Learning Techniques — **Apr 2025**

- Processed a 3M-record used-car dataset with 60+ features; applied cleaning, outlier removal, and cardinality reduction.
- Developed and benchmarked 5 ML models (RF, XGBoost, LGBM, DT, ANN); best R^2 0.947 (Random Forest).
- Engineered a Scikit-learn pipeline (StandardScaler, OneHotEncoder) and deployed a Streamlit app for real-time prediction.

TECHNICAL SKILLS

Test Automation: Playwright, Selenium WebDriver, Maestro, Appium, PyTest, Cucumber (BDD/Gherkin), Allure Reports
Testing Methodologies: Functional, Regression, Smoke, Exploratory, API, Performance, Accessibility, Static, UAT; Test Strategy & Planning, Test Case Design, Defect Lifecycle Management, Root Cause Analysis (5 Whys), Risk-Based Testing, SDLC/STLC, Agile/Scrum
API & Backend Testing: REST API Validation, JSON Schema, Postman, Bruno, Apidog, SQL Query Validation
Performance Testing: k6, Apache JMeter (load, stress, concurrent user simulation)
CI/CD & Tools: GitHub Actions, Docker, Git, GitHub, Azure DevOps, JIRA, ClickUp, Testiny
Programming: Python, JavaScript/TypeScript, Java, C++, SQL
Databases: MySQL, PostgreSQL, SQL Server, MongoDB, Firebase
AI-Assisted Testing: LLM evaluation, MCP-assisted test generation, prompt-regression testing

CERTIFICATIONS

- **ISTQB Certified Tester, Foundation Level (CTFL 4.0)**, 2026
- **Machine Learning Specialization**, DeepLearning.AI / Stanford University (Coursera)

LEADERSHIP / EXTRACURRICULAR

- **Junior Teaching Assistant – CSEN202: Introduction to Computer Programming:** Mentored 100+ students, reinforcing programming fundamentals and reviewing assignments to improve code quality and conceptual understanding.
- **Team Leader – Art Cairo 2025, Grand Egyptian Museum:** Led a team of ushers across 3 operational zones, ensuring smooth guest flow and managing on-site coordination for 500+ international attendees at an event hosting 20,000+ visitors.
- **HR Head – ElWarsha GUC:** Led HR operations including attendance tracking, member performance monitoring, and annual club reporting; organized events and workshops to strengthen team cohesion.
